DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim1 rejected under 35 U.S.C. 102(b) as being anticipated by Bamburak US 5,197,092.

As per **claim 1**, Bamburak teaches a method of forwarding a call directed to a wireless device operational on a wireless network to a destination number comprising (title, abstract, figure 1 and C2, L40-58):

detecting the presence of the wireless device by a base unit, the base unit including a switch having at least two settings (figure 4 step #50 states "Receiving station activation switch closed?", which is used to determine how to route/forward calls and C3, L8-37),

determining the destination number to which the call will be forwarded (figure 4 step #55 teaches obtaining call forwarding number);

creating a data message comprising a call forwarding instruction AND causing a communication between the wireless device and the wireless network wherein the data message is communicated to the wireless network (figure 4 step 62 teaches the

Application/Control Number: 10/762,891

Art Unit: 2683

personal communicator/wireless device provides network with call forwarding number); and

wherein the determining step is performed by the base unit scanning a memory location in the wireless device to retrieve the destination number based on the switch setting (again, step 62 teaches communications between the wireless device and the base station, which reads on "base unit scanning a memory location in the wireless device to retrieve the destination number based on the switch setting". The primary examiner notes that this "operation" can either be base unit initiated and/or wireless device initiated, ie. there is no difference as to which device initiates the operation and as to if the data is "pushed" or "pulled")

Allowable Subject Matter

Primary Examiner's note: After reviewing the specification and finding a considerable amount of prior art which reads on the claimed limitations, the examiner notes that amending with the following details may place the application in condition for allowance:

- 1. Specifically claim that there is a wireless link between the wireless base unit and wired phone and that the wireless link is Bluetooth.
- 2. Specifically claim that the message is an SMS message which is received by an SMSC
 - 3. Specifically claim support for GAIT.
